PROFESSIONAL SUMMARY

Backend-focused Full-Stack Engineer and final-year Artificial Intelligence & Data Science student with hands-on experience building modular REST APIs and containerized backend services using FastAPI, SQL, and Docker. Experienced in designing scalable backend systems with a focus on reliability and clean architecture. Seeking a backend or full-stack engineering role to build production-ready software systems.

PROJECTS

CareerLens

FastAPI, SQLAlchemy, Neon DB (PostgreSQL), Groq

Link: [GitHub](#)

- Built an AI-powered backend system that analyzes resumes against job descriptions to identify skill gaps and generate targeted interview questions.
- Designed modular REST APIs using FastAPI to handle resume uploads, ATS resume generation, and structured interview workflows.
- Implemented relational database models using SQLAlchemy with Neon DB to store analysis history, generated resumes, and interview data.
- Integrated Groq LLM APIs for resume evaluation, skill extraction, and dynamic content generation.
- Developed an end-to-end pipeline supporting multiple resume submissions and persistent tracking of past analyses.

CodeSage

FastAPI, React.js, Docker, Monaco Editor, Groq

Link: [GitHub](#)

- Built an AI-powered code review platform that analyzes user-submitted code and generates structured improvement and refactoring suggestions.
- Designed FastAPI-based backend services to process code inputs, manage AI inference workflows, and return structured review outputs.
- Integrated Monaco Editor to provide an in-browser development environment supporting real-time editing and review workflows.
- Containerized the application using Docker to ensure consistent deployment and isolated runtime environments.
- Integrated Groq LLM APIs to enable low-latency code analysis and automated refactoring recommendations.

Sangrahak

Python, Flask, React, MongoDB, ARIMA, WebSockets, JWT, Groq

Link: [GitHub](#)

- Built a multi-depot inventory management system supporting real-time stock tracking and centralized inventory visibility across locations.
- Implemented demand forecasting using ARIMA models to predict future stock requirements and compare predicted vs actual sales trends.
- Engineered WebSocket-based real-time monitoring to deliver live inventory updates and alert notifications.
- Developed secure backend workflows using JWT authentication and integrated Groq-LLM to generate inventory insights and automated reports.

TECHNICAL SKILLS

Backend	FastAPI, REST APIs, Node.js, WebSockets, JWT
Databases	PostgreSQL, MySQL, MongoDB, Neon DB
Infrastructure	Docker, Git, AWS (EC2, S3), Microsoft Azure (Basics)
Languages	Python, C++, JavaScript, SQL
Frontend	React.js, Next.js, Redux Toolkit, Tailwind CSS

EDUCATION

B.E. in Artificial Intelligence & Data Science

Terna Engineering College

2022–2026

CGPA: 8.55 / 10

Higher Secondary Certificate (HSC)

R.K. Talreja College of Science

2022

75%

Secondary School Certificate (SSC)

St. Jude's High School

2020

89%
